

# Quality assured green technology manufacturing

**Driven by our advanced aerospace quality systems and value stream methodology our green technology manufacturing delivers fresh benefits to the energy sector.**

Utilising proven technologies our innovative production of propeller sleeves and components, ground shaft assemblies, and power transmission shafts with splines bring new manufacturing options to wind turbine and wind energy systems.

A perfect pairing of agile and innovative practices with environmentally-friendly operations, working with Middlesex Aerospace the energy industry can further reduce the carbon footprint of wind turbines.

**reducing  
the carbon  
footprint of  
wind turbines**
